

Rajeev Ranjan Mishra

Backend Engineer

rajeevranjanmishra4339@gmail.com | +91 87898 10841 | Jaipur, Rajasthan | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Backend Engineer specializing in the Java and Spring Boot ecosystem, with hands-on experience designing and building scalable, distributed backend systems and microservices. Strong foundation in low-level and high-level system design (LLD/HLD), SOLID principles, RESTful API architecture, and database optimization. Proven track record of slashing query latency, optimizing relational databases, and engineering resilient, event-driven data synchronization pipelines. Experienced in containerizing microservices with Docker, deploying to AWS (EC2, S3), and automating enterprise CI/CD workflows using GitHub Actions and self-hosted runners to ensure high availability and clean, maintainable code.

TECHNICAL SKILLS

- **Languages:** Java, SQL, Python, JavaScript, C#
- **Backend & Architecture:** Spring Boot, Spring Security, Spring Data JPA, Hibernate, RESTful APIs, Microservices, System Design (LLD/HLD), SOLID Principles, JWT Authentication
- **Databases & Caching:** MySQL, PostgreSQL, MS SQL Server, Redis, SQLite
- **Cloud, DevOps & Tools:** Docker, GitHub Actions (CI/CD, Self-Hosted Runners), AWS (EC2, S3), Git, Linux/Bash, Maven, Swagger, Postman
- **Frontend:** React.js, Tailwind CSS, HTML, CSS

PROFESSIONAL EXPERIENCE

CyberRoot, Software Engineer

Jan 2026 – Present | Jaipur, India

- **Architected an offline-to-cloud distributed synchronization engine**, implementing SQL Server Change Tracking (CT) and topological dependency resolution to ensure conflict-free, transactional data replication across distributed nodes.
- **Engineered high-throughput background daemon services** processing **10,000+ daily** hybrid cloud syncs, integrating local embedded storage for resilient state persistence and streaming multipart pipelines for reliable data and image transmission.
- **Automated end-to-end CI/CD delivery pipelines using GitHub Actions with self-hosted runners**, orchestrating automated test execution, artifact packaging, and zero-downtime deployment workflows.
- **Spearheaded backend query and memory optimizations**, introducing in-memory caching layers and eliminating legacy I/O bottlenecks to reduce reporting runtimes from **3 minutes to 3 seconds** and achieve instant barcode lookups.
- **Designed scalable data-retrieval RESTful APIs**, resolving 10-second bulk query bottlenecks through offset-based pagination and early filtering to serve 200-record datasets in **<300ms**.
- **Engineered high-performance catalogue endpoints** aggregating relational master data, integrating response compression (Gzip/Brotli) to reduce payload transfer sizes, lower network overhead, and accelerate downstream client rendering.

Sunbase, Backend Engineer (Remote)

Oct 2024 – Apr 2025 | USA

- **Resolved 100+ critical bugs** across core internal systems, significantly reducing system downtime and improving overall platform stability.
- **Led backend development** for the Designer Portal (Java, MySQL), engineering data-heavy APIs for dynamic widgets and optimizing load times via strategic caching.
- **Developed and maintained scalable APIs** to support cutting-edge AI integrations, including automated Notes Summary and AI-generated transcription features.
- **Partnered cross-functionally** with AI, frontend, and QA teams to ship production-ready solutions, earning the "Rising Stars" award in the company-wide SQLathon Widget Competition.

Masai School, Software Engineer (Remote)

Nov 2023 – May 2024 | Bengaluru

- **Engineered backend services** for an event management platform using Python (Flask) and MySQL, integrating seamlessly with React frontend components.
- **Architected RESTful APIs** for core user authentication flows (registration, password resets, email verification), reducing user onboarding time by **30%** across **500+ user registrations**.
- **Optimized device management APIs** by implementing database pagination and event-driven user search, significantly improving query efficiency and data retrieval speeds.

PROJECTS

Karyalaya (KEMS), Java, Spring Boot, Spring Security, Hibernate, MySQL, JWT, Swagger

- **Engineered a comprehensive employee management system** from scratch, delivering a fully functional backend API to handle organizational task delegation and continuous performance tracking.
- **Implemented secure Role-Based Access Control (RBAC)** utilizing Spring Security and JWT authentication, ensuring strict data isolation and secure routing between Manager and Employee functionalities.
- **Developed robust CRUD APIs** for task management and performance reviews, leveraging Hibernate for efficient ORM mapping and MySQL for data persistence, fully documented via Swagger.

EDUCATION

Bachelor of Computer Applications (BCA), Galgotias University

May 2026 – Jul 2029 | Remote

Full Stack Web Development (Full-Time), Masai School, Bengaluru

Jul 2022 – Jun 2023 | Remote
