

Rajeev Ranjan Mishra

Backend Engineer

rajeevranjanmishra4339@gmail.com | +91 87898 10841 | Jaipur, Rajasthan | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Results-driven Backend Engineer specializing in scalable API architecture, high-performance data processing, and offline-to-cloud synchronization. Proficient in designing robust backend systems using **Java (Spring Boot)** and **C# (.NET 8)**, with deep expertise in optimizing relational databases (MySQL, SQL Server). Proven track record of slashing API latency, resolving complex system dependencies, and integrating production-ready AI solutions to drive business efficiency.

TECHNICAL SKILLS

- **Languages:** Java, C#, SQL, Python, JavaScript
- **Backend & Frameworks:** Spring Boot, Spring Security, .NET 8, ASP.NET Core Web API, Entity Framework (EF Core), Dapper, Flask
- **Databases:** MS SQL Server, MySQL, SQLite
- **Architecture & Concepts:** RESTful APIs, Distributed Systems, Multi-Tenant SaaS, Microservices Concepts, JWT Authentication
- **Tools & Infrastructure:** Git, GitLab, Docker, SVN, IIS Deployment, PowerShell Scripting, Postman, Bruno, Swagger, Jira

PROFESSIONAL EXPERIENCE

CyberRoot, Software Engineer

Jan 2026 – Present | Jaipur, India

- **Architected an offline-to-cloud database sync engine** (.NET 8), implementing SQL Server Change Tracking and Topological Sort to resolve parent-child foreign key dependencies for conflict-free data replication.
- **Engineered a Windows Worker Service** processing 10,000+ daily LAN-to-cloud data and image syncs, integrating SQLite for offline state tracking and multipart/form-data for reliable file transmission.
- **Spearheaded legacy backend optimizations**, deploying in-memory Dictionary caching and streamlining MS Access I/O to slash report generation from 3 minutes to 3 seconds, and barcode lookups from 3 minutes to instant.
- **Developed scalable data-retrieval APIs** for inventory systems, resolving 10-second bulk query bottlenecks via offset-based pagination and early filtering to deliver structured 200-record pages in <400ms.
- **Built high-performance product catalog endpoints** aggregating relational master data, implementing Gzip/Brotli response compression to shrink JSON payloads for faster rendering and seamless frontend integration.

Sunbase, Backend Engineer (Remote)

Oct 2024 – Apr 2025 | USA

- **Resolved 100+ critical bugs** across core internal systems, significantly reducing system downtime and improving overall platform stability.
- **Led backend development** for the Designer Portal (Java, MySQL), engineering data-heavy APIs for dynamic widgets and optimizing load times via strategic caching.
- **Developed and maintained scalable APIs** to support cutting-edge AI integrations, including automated Notes Summary and AI-generated transcription features.
- **Partnered cross-functionally** with AI, frontend, and QA teams to ship production-ready solutions, earning the "Rising Stars" award in the company-wide SQLathon Widget Competition.

Masai School, Software Engineering Intern (Remote)

Nov 2023 – May 2024 | Bengaluru

- **Engineered backend services** for an event management platform using Python (Flask) and MySQL, integrating seamlessly with React frontend components.
- **Architected RESTful APIs** for core user authentication flows (registration, password resets, email verification), reducing user onboarding time by 30% across 500+ user registrations.
- **Optimized device management APIs** by implementing database pagination and event-driven user search, significantly improving query efficiency and data retrieval speeds.

PROJECTS

Karyalaya (KEMS), Java, Spring Boot, Spring Security, Hibernate, MySQL, JWT, Swagger

- **Engineered a comprehensive employee management system** from scratch in just 5 days, delivering a fully functional backend API to handle organizational task delegation and continuous performance tracking.
- **Implemented secure Role-Based Access Control (RBAC)** utilizing Spring Security and JWT authentication, ensuring strict data isolation and secure routing between Manager and Employee functionalities.
- **Developed robust CRUD APIs** for task management and performance reviews, leveraging Hibernate for efficient ORM mapping and MySQL for data persistence, fully documented via Swagger.

EDUCATION

Bachelor of Computer Applications (BCA), Galgotias University

May 2026 – Jul 2029 | Remote

Full Stack Web Development (Full-Time), Masai School, Bengaluru

Jul 2022 – Jun 2023 | Remote
